Design and develop a College Examination and Result Management System using Java and MySQL to manage students, subjects, examinations, and student marks.

Create the following tables:

1. Student(Student_ID, Student_Name, Program, Semester, Email)
2. Subject(Subject_ID, Subject_Name, Credits, Semester)
3. Examination(Exam_ID, Subject_ID, Exam_Date, Max_Marks)
4. Result(Student_ID, Exam_ID, Marks_Obtained, Grade)

Application requirements:

- Add and update student, subject, and examination details.
- Enter and update marks for students.
- Calculate subject-wise average marks and identify the highest-scoring students using aggregate queries.
- Maintain the log for each of the activities performed in the application.
